

We build the software that runs **your operation.**

Web platforms, mobile apps, ERP integrations, cloud infrastructure,
AI automation, and product design — delivered by one accountable team.

01

BUILD

Digital products designed around the way your operation works.

02

CONNECT

ERP, data and workflows brought together into one dependable system.

03

OPERATE

Monitoring, support and continuous delivery after launch.

One engineering partner, from first workflow to production.

Web Platforms

Fast portals, storefronts and internal tools, typed end to end.

- Next.js platforms
- Commerce & portals
- Design systems

Mobile Apps

Reliable iOS and Android products built from one maintainable codebase.

- React Native & Expo
- Offline-first sync
- Store releases

ERP & Integrations

Systems that keep finance, inventory and sales aligned.

- Odoo ERP
- APIs & webhooks
- Data migration

Cloud & DevOps

Automated, observable infrastructure designed for dependable operations.

- CI/CD pipelines
- Containers & IaC
- Monitoring

AI & Automation

Useful assistants and document workflows grounded in your own data.

- Enterprise retrieval
- Workflow automation
- Evaluations

Product Design

Clear user flows and accessible component systems engineers can ship.

- Discovery & flows
- Clickable prototypes
- Component libraries

SELECTED WORK

Built around measurable operational outcomes.

20+ Years of SOT behind us	42 Products in production	1,400+ Releases shipped	99.9% Platform uptime
IT DISTRIBUTION Distributor Commerce Portal	B2B commerce over a live ERP, including contract pricing, bill-of-quantity workflows and automated quotation PDFs.	38k SKUs live	0.4s Median page
SECURITY SYSTEMS Field Operations App	Offline field workflows across three regions, syncing job sheets, photographs and signatures when connectivity returns.	260 Daily jobs	100% Offline capable
ENTERPRISE IT Procurement Assistant	An AI assistant that reads tenders, matches line items against the catalogue and drafts responses for human approval.	6h Saved per tender	94% Match accuracy

A clear path from uncertainty to a system your team can own.

01	Discover	We map the current workflow, users, data, constraints and risks before proposing the replacement. You receive: scope, estimate and risk register
02	Design	We turn agreed flows into screens and a component system you can review by using it. You receive: clickable prototype
03	Build	Two-week iterations ship continuously to a staging environment visible from day one. You receive: fortnightly releases
04	Operate	Monitoring, support and a continuing roadmap keep the product dependable after launch. You receive: SLA and support rota
